

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0054] with the following amended paragraph:

[0054] As well as streaming (i.e., intelligent, real-time transmitting of streaming content) and proxy functionality, the proxy servers 120-320 also possess the ability to cache streaming content (i.e., dynamically store streaming content). This allows this content to migrate onto the edge of the network, where the content will remain for more than one use. Caching allows bandwidth consumption to be minimized across expensive wide area network links, or on more saturated internal backbones. This translates to a significant cost advantage over conventional delivery systems across a network infrastructure.
